Rhino Rubber, LLC Introduces “NEW” Industrial Tire K-2

North Canton, OH--Rhino Rubber, LLC recently introduced a new, solid press-on tire, the K2 Tire. Developed by Amerityre Corp., Boulder City, Nevada U.S.A.. The K2 tire is made of an innovative, environmentally friendly material called Kryon™. The Kryon material bridges the gap between rubber and polyurethane tire materials. Combined with new state-of-the-art, high-tech manufacturing process, this new product offers improved tire performance to industrial truck and material handling applications.

The Rhino Rubber K2 Tire by Amerityre offers greater carrying and load capacities than rubber tires. It also offers 28% lower rolling resistance over leading rubber compound tires and is non-marking. The K2 improves wear properties and extends service life over rubber tires in the most severe applications.

Tim Ryan, President of Rhino Rubber, says "We are excited to introduce the new K2 Tire because it offers so many benefits to industrial tire users. Every critical aspect of industrial tire performance improves with K-2 over rubber tire equivalents."

Rhino Rubber offers a wide variety of industrial tires, wheels and accessories. For more information on the K2 Tire, visit the Rhino Rubber website at www.rhinorubber.net or call 877-744-6603.
